## Course Description:

This introductory course will give students an integrated overview of the science of climate change and an analysis of the implications of this change for patterns of daily life in their own circumstance and around the world. Humankind is facing an unprecedented environmental crisis of global proportions. Scientists from across the world have issued stark warnings about the potential disruption and destabilization that changes in Earth's climate will most likely cause in the near future for the life systems upon which modern civilization depends. The social and political implications of climate change have begun to become apparent as local communities in widely different parts of the world struggle to adapt to new patterns of excessive rainfall, prolonged droughts and severe weather events. Internationally, nation states have endeavored to forge diplomatic agreements to help humankind cope with both the causes and consequences of global climate change.

## Course Background

This course will examine the interplay of race, socio-economic status, and interest group politics and the formulation and implementation of U.S. federal and state environmental policy. It will involve an interdisciplinary examination of some fundamental environmental problems faced by individuals and communities of color. In particular we will consider the proposition that people of color and socio-economically disadvantaged individuals, whether residing in urban or rural communities, bear a disproportionate burden of environmental pollution and its health consequences. Studies suggesting that people of color have environmental burdens imposed upon them unfairly due to over-siting of industrial plants and landfills in their communities and from exposures to pesticides and other toxic chemicals at home and on the job will be reviewed and analyzed. Consideration will be given to the viewpoint that there exists within the United States, as well as globally, a pattern of environmental inequity, injustice and

## Course Description:

Our environmental circumstances pose problems of value and choice for each of us and challenge us to reconsider the way we act individually and collectively in an ever changing ecosystem. Whether we like it or not there is no escaping the fact that ethical values are embedded in the premises and assumptions of all decisions we make concerning land and resource use.

Responsible land management has come to include concern for land as habitat -- not just for humankind alone -- but for other communities of species that inhabit it as well. In addition, we have come to understand that land management needs to reflect an understanding of the land in its ecological context, including its local and larger significance in the hydrological cycle, the carbon cycle, public health, etc.

This course invites students to reflect upon the problems confronting those who have to make decisions about land management and resource use. It highlights different approaches to environmental ethics and examines the underlying assumptions of the scientific, managerial, economic, aesthetic, religious, judicial and public policy discourse on the environment.

The context and character of these remarks

This is generic information – NOT subject specific.

It is not “required” in any sense.

This is NOT a series of recipes, but rather a presentation of some general advice

Names and brands of specific software are mentioned but simply by way of illustrating the functionality they provide....This software is not “endorsed” or promoted, but either it or its functional equivalent may be recommended.

# So, 1) Accessing information

Comments here are a to be considered a supplement to the important and very helpful lecture by George E. Clark – Harvard’s Environment Librarian.

You can (and should) view his hour-long recorded lecture on:

“Using the Harvard University Library”

available at:

<http://cm.dce.harvard.edu/2007/02/82004/P02/index.shtml>

# So, 1) Accessing information

- This is not a trivial task....
- Yes, the internet with Google provides access to a vast amount of information, BUT it is not all of equal value or reliability.
- There is no such thing as worthless information, but some things come pretty close.
- In some cases the only worth there is in some information is that it is pretty useless.

# Mainstream news sources can be of little value....

- For a variety of reasons, mainstream news sources can be of little use
- ...Unless, of course, your subject is “*the mainstream media’s understanding of \_\_\_\_\_*”  
In this case mainstream news materials become your primary subject matter and therefore your primary source of information.
- Reasons for decline of mainstream media are many....and they were foreseen by clear thinkers.

*A*  
*Salute to*  
**Edward R. Murrow**  
*October 25, 1958*

# More recent critiques are now widely available

- The ongoing Frontline series gives a compelling critique of the decline of America's news media.
  - See in particular:  
"Frontline Report - News War 3: What's Happening to the News, 27 February 2007.  
(See also Part 1 and Part 2)
- What is Katie Couric up to for her \$13,000,000 salary: "First Look: Katie's Makeover," ***CBS News Online***, (2 March 2007).

# Added to the general decline...

- On top of the universal decline in the quality and reliability of American broadcast news is the deliberate attempt to subvert the news with systematic advertising “dressed up” as news.

Consider the “Fake News” phenomena of the VNR:

"Fake TV News: Widespread and Undisclosed... How Corporate-Funded Propaganda Is Airing On Local Newscasts As "News", "*Democracy Now*, (6 April 2006).

# So, Tip #1

- Start keeping a list of your own most useful sources of online information.
- Create an (internal) web-page for quick access to the information most relevant to your work.
- Update the list whenever needed.
- Get a range of vantage points represented in this basic list.

# Organizing your information

- You should figure out an “electronic note taking system.”
- Several are available commercially, and *we are not “endorsing” any particular one* BUT you should try get in the habit of using something that can be cumulative, multifunctional and easily integrated with word-processing software that you will be using to write.

## So, Tip #2

Obtain, customize, use and become very familiar with an electronic note-taking system

# Organizing & Retrieving Notes

## Searching & Sorting...

The screenshot displays the EndNote 7 (Bld 98) interface. The main window shows a list of references in a table with columns for Author and Title. A search dialog box titled "Search 'Data-Base-2005.enl'" is open in the foreground, allowing for keyword searches across the library. The dialog includes fields for keywords, search criteria (And, Or, Not), and search options like "Match Case" and "Use indexes".

# 3) Presenting Research

- Use word processor with ability to create endnotes/footnotes – automatically with Endnote™, etc.
- Include full bibliographic reference of web-based material. (stored in your electronic note-taking database).
- Present your material in a “Document” format and in HTML (with active hyperlinks).

# Presentation

Present material in Document format and PDF format if you have access to the Adobe Acrobat PDF Professional Edition

- Example

from *American Behavioral Scientist*:

“From Sidekick to Sideshow—Celebrity, Entertainment, and the Politics of Distraction Why Americans Are ‘Sleepwalking Toward the End of the Earth,’” *American Behavioral Scientist*, 49, 3, (November 2005), pp. 393-409.
